Results Report

Point of Interest 1: Yellow painting layer

We have the cross section of the sample we collected from Point of Interest 1.

The magnification of the cross section confirms that we have a yellow surface painting layer.

The magnification is not enough to get clear results.

Point of Interest 2: Thread from the canvas

The magnification of the fabric reveals that it consists of threads, which consist of fibers.

The magnification achieved is not enough to understand what kind of fibers they are.
