

# Optical Microscopy Results

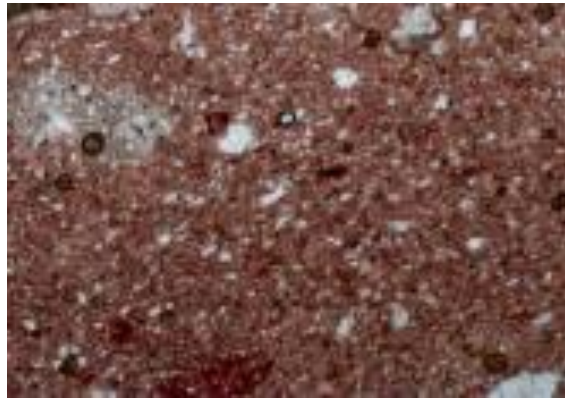

**Clay lamp**

The SciArt Project  
2024

## Results Report

### Point of Interest 1: Main body of the lamp

The observation of the lamp's surface with an optical microscope indicates that it is heterogeneous, as it consists of grains of various colors and sizes.

### Point of Interest 2: Residues on the spout of the lamp

During the examination of the sample we collected from the lamp's spout, we see that it is composed of dark-coloured and rounded grains of different sizes. The morphology resembles that of a liquid.
