Results Report

Point of Interest 1: Green painting layer

This is the cross section of the sample we collected from Point of Interest 1.

The magnification of the cross section confirms that we have a green surface painting layer.

The magnification is not enough to get clear results.

Point of Interest 2: Wood from the plywood

We have the sample we collected from the plywood on which the artefact is painted.

The magnification achieved is not enough to identify what kind of wood was used for the plywood.
